

How to fit GRIPIT Fixings

GripIt Fixings are used to attach heavy items to plasterboard walls. Across the four different sizes, GripIt Fixings can hold from 71-113kg, meaning you can attach anything from curtain rails to televisions to your plasterboard walls.

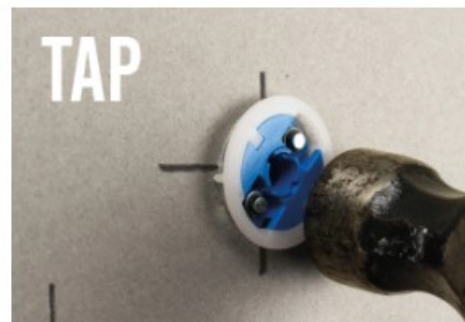

To fit GripIt Fixings, you will need: GripIt Fixings, the relevant size flat drill bit, and a hammer, all of which can be purchased on the BS Fixings website.

STEP 1

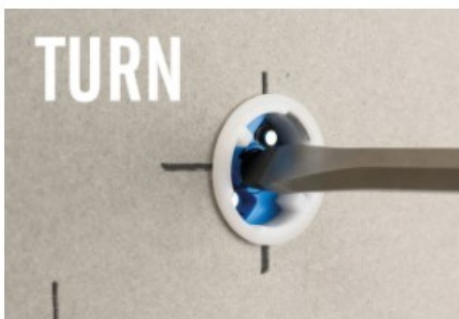

Use a flat drill bit to drill a hole in the plasterboard.

STEP 2

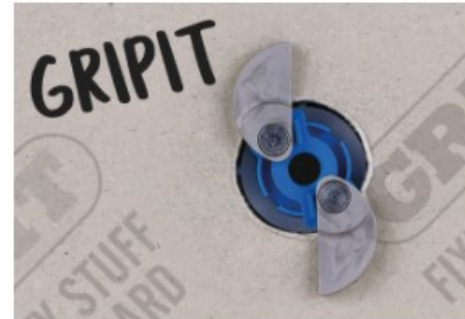

Use a hammer to gently tap the fixing into the drilled hole.

STEP 3

Use a screwdriver to turn the cam and open the wings for super grip strength.

STEP 4

Slim gripping wings open in the cavity behind the plasterboard to provide a secure anchor and distribute weight more effectively than conventional fixings or plugs.
