

Self-Adhesive Base Insulation Hangers

Aluminium Pin Self-Adhesive Base Hanger

Base: 50mm x 50mm Galvanised Steel.

Pin Shank: 2.7mm diameter Aluminium.

Washer, Self-Locking Spring Fastener Clip: 30mm diameter to suit 2.7mm Pin Galvanised Steel.

Self-Adhesive Base Hangers are designed to efficiently fix insulation to metal, attenuators, enclosures and smooth sound substrates. Surfaces must be clean, dry and free of dust, grease, oil and any other loose matter

before the Hangers are applied. It is recommended that the user make test bonds to ensure the compatibility between the substrate and adhesive.

Self-Locking Washers are supplied with the Hangers and are applied over the protruding Pin to retain the Insulation being fixed. Dome Washers are also available, if needed, to cover the sharp point of the Pin for safety.

Also available in Galvanised steel, stainless steel 304 and 316.

Sold in packs of 500 or 250 depending on length of pin. This includes the Self-Locking Washers.
